Animal Safety Gloves

Safety note: Our gloves are meant for professional use and are made in superior quality. However we can not guarantee 100 % protection and biteproof in the different situations that may occur with animals. We do not accept any liability in case of injury. Please be aware of this and use them cautiously.

H1 Long gloves for all kinds of animals (pair)

This safety glove gives a very good basic protection for dealing with cats, small primates and other small mammals. It has a really great puncture resistance! The glove is also suitable for birds of prey and small reptiles and offers very good grip control.

- hand made of soft cow hide
- thick cowhide cuff (split leather)
- glove lined with cotton
- total length about 51 cm
- weight: 0.5kg (pair)
- sizes: women / men

H2 Sensitive gloves (pair)

This extra-long and sensitive glove is suitable for operating touch screens. Especially when working with small animals, it ensures almost perfect sensitivity and dexterity like no other glove on the market! Please evaluate your scope of application for this glove regarding the security level! We are happy to advise you by phone or e-mail.

- Material hand: elk leather + Kevlar® - inner lining (Moose leather is much more flexible than cowhide)
- Arm material: Cordura®/Dynafil and Kevlar® as inner lining.
- Total length: approx. 60 cm
- Sizes: women / men

H3 Long & cushioned safety gloves (pair)

Long safety gloves with increased protection for aggressive cats, monkeys, raptors, small wild animals and dogs. Made of elk leather, a Kevlar® layer and Cordura®. Elk leather is more robust than cow leather. Featuring a double leather layer on the thumbs and inside of index finger. This gives better protection than H2 while still being flexible.

This glove is perfect when the animal must be grabbed directly.

- cuff: resistant, cowhide (split leather)
- hand: soft elk hide, robust and flexible
- lining: Kevlar®
- length: 60 cm
- weight: 0.7 kg (pair)
- size: women / men

H4 Long & cushioned safety gloves with bite plates
(pair)

Long, robust safety gloves H4 for handling dogs with bite plates. The cuff is extremely firmly padded and offers excellent protection. Increased bite protection thanks to the Cordura® protective plates in the lower arm area and on the back of the hand. These mobile protective plates over the fingers deflect possible bites from the fingers. Hand is made of elk leather (elk leather is more robust than cow leather) and a Kevlar® layer. In spite of its high level of protection the flexibility is still maintained enables the handling of aggressive cats.

- cuff: Cordura® with Kevlar® lining
- hand: elk hide (robust and flexible)
- pressure-distributing bite plate on the top of the hand
- lining: Kevlar®
- length: about 50 cm
- weight: 0.6kg (pair)
- sizes: women / men

H5 Double - Glove with bite cushioning
(pair)

This safety glove offers an extreme bite protection with extra cushioning in lower arm area, especially bite-resistant double glove for half-arm protection with very high protection factor against large and aggressive dogs. Also very well-suited for powerful raptors. Inner and outer gloves can be used independently – This makes this glove usable in many fields. Exceptionally flexible inner glove for gripping cats and dogs directly, and double function for high protection, e.g. in combination with dog capturing poles for large and aggressive dogs. The inner glove is flexible and robust due to the elk leather, the outer glove is removable and consists of extra-thick smooth cow leather.

- outer glove material: cowhide (not lined)
- inner glove material: elk hide and Kevlar® / cuff made of cowhide
- length: about 50 cm
- weight: approx. 1.1 kg (pair)
- sizes: women / men
